

BUSINESS PROJECT "BOSSTRADER"

The BOSSTRADER business, was founded in 2017 when after attempting to automatic trading noticed that all software that are available on the market produced profits only when stock market conditions were favorable; otherwise only they produced losses.

After further investigation on how to implement an automated system that would be able to operate in the market as a professional trader obtaining real and significant gains to make it available to interested parties started doing the initial code base bosstrader.

Our business is to give the user the possibility of having a professional trader at their disposal which will be able to operate in the stock market of cryptocurrencies and able to profit and learn to avoid mistakes, so the promise of value it is given in profits that can be obtained using the bosstrader.

The revenue generated with the participation of this business will be:

1. The first source of income of the participants in this business is the use of BOSSTRADER, where we estimate up to 30% profit per month used.
2. The second source of income for participants will be the referral program where interested parties may participate as authorized resellers and get up to 40% profit on each sale.

To achieve all our goals are needed \$ 37,500.00 for the implementation of all improvements are still required to have the best software for algorithmic trading, sustaining the team and creating websites promotion and maintenance of servers and databases.

From week 24 all participants (developers and investors) will receive rewards as follows:

1. Each participant will receive a lifetime license for BOSSTRADER.
2. Each participant may participate as a reseller of licenses, for it will receive prices up to 40% off.
3. Each participant will receive \$ 50 credit to set up your VPS.

From week 24 licenses to the public will be offered, licenses will only be issued with duration of 30 calendar days at a cost of \$ 90 USD, knowing this we can calculate the lifetime license costs an average of \$ 38,000.00 (whether it would be the cash equivalent paid for the license and monthly renewal for 35 years.)

COMPENSATION PLAN

There are two main benefits of participating in the funding campaign of our business to know, first, each participant will receive a license according to their contribution to use the BOSSTRADER without having to pay the monthly installments during the time of activated license (If lifetime license will never pay renewal.)

Secondly, all those involved in this business, may participate in the referral program (marketing) in which receive licenses up to a 40% discount that may be sold at the standard price of \$ 90. That is, one participant supports financially the campaign receives its license and the software will automatically start making money, this same person shows his/her friends and family the result, your referrals will want to buy the software also so you must pay the \$ 90 monthly (while

wishing to have the service active) which should have \$ 36 lifetime license for the person who will bring this referral. Now then, you imagine receiving \$ 36 USD per month for renewal for each guest? 10 guests will receive \$ 360 USD per month, which are about \$ 4320.00 USD per year.

Contribution in USD	Benefits		
	Time License	Renewal	Plan Re-seller% discount
150-200	12 months	Monthly renewal	20%
201-300	36 months	Monthly renewal	25%
301-400	48 months	Monthly renewal	30%
401-500	60 months	Monthly renewal	35%
501-649	72 months	Monthly renewal	40%
> = 650	Life time	Never	40%

Proponents of this business are:

- CEO: Robin Ramirez Legarda, and junior systems engineer software programmer and systems applied in market trader with experience of 5 years senior Knower of cryptocurrencies and financial markets.
- Programming Director: Carlos Vargas, an expert programmer and software developer in trading in different financial markets, expert implementation of automated systems and web design.

Our experience is marked by extensive experience in the financial markets such as Forex and binary options, and the date on which this document is done completed two years developing improvements to the original code.

On the other hand, each user will receive training software about trading and cryptocurrencies and will also receive financial education and personal growth books (currently our virtual library contains over 1000 books on trading, financial education and self-improvement.)
